StallFlow update

Duxie's Homemade | what changed in the last 2 days

To: Marian **From:** Jacques

Marian, here is what is new in the app. Everything is live now. Just open it as usual.

Selling at the till

- **Cash, Card or EFT:** choose how each customer paid. Numbers shows takings by method, and the cash-up counts only the cash in the tin.
- **Receipts on WhatsApp:** send the customer a receipt after a sale. Their number is typed for that one message and never saved.
- **Sales are never lost during updates:** if the app updates or the signal drops, the sale waits on your phone and goes through by itself.

Pre-orders and the order form

- **Share the order form:** send it on WhatsApp, or download it as a picture for Facebook or Instagram. Works for every market.
- **All three jam sizes:** every jam now has its three sizes, so you can fill in a quantity for each. Pineapple / Granadilla 125 ml is included.

Stock

- **New price screen:** retail prices come first, one box per product with a Saved tick, so updating is much quicker.
- **Add the missing sizes:** one button on the Stock screen gives every jam its three sizes without touching existing stock or prices.

On your phone

- **Landscape:** turn the phone sideways and the app turns with it.
- **Fixed:** the People screen layout, and the size line printing over the QR code on labels.
- **How-to videos:** short captioned videos under More > How-to videos: till, scanning, pre-orders, stock, labels, stocktake, markets.

Safety

- **Weekly backup:** a copy of your sheet is made each week, without customer names or numbers.
- **Google sign-in:** if it ever fails, the app shows a clear message and a Retry button.

Three things for you to do

1. Open **Stock** and tap **Add the missing sizes**. It takes up to a minute.
2. Reprint labels for any product that shows a size line.
3. Make the next market the live one when the banner at the top of the till asks.

Anything looks wrong? Use **More > Report a problem** in the app.
